

Internship Monthly Report

Intern's Name: Pawan Kumar K.P

USN: 4SO23MC068

Internship Position: Web Developer

Company Name: Accolade Tech Solutions Pvt. Ltd.

Reporting Period: 05.05.2025 – 29.05.2025

Overview of Monthly Activities:

Week 1: Started the internship with basic programming tasks in C, such as:

- Adding two numbers.
- Implementing loops (for, while).
- Write a program to generate the Fibonacci series.
- Attended sessions to understand the Software Development Life Cycle (SDLC).
- Learned about important SDLC terminologies and the role of each phase in software projects.
- Understood the key differences between a web application and a website.
- Explored how software projects are initiated and structured in a professional environment.

Week 2: Achievements and Contributions

- Strengthened foundational C programming skills.
- Developed a clear understanding of the basic concepts behind software development methodologies.
- Actively participated in discussions about project structure and SDLC.

Week 3: Skills and Knowledge Gained

- Begin work in the full-stack development domain.
- Learn the basics of front-end and back-end technologies.
- Set up the development environment for full-stack application development.

Week 4:Goals for Next Week

- Started With the Project Vehicle Assistance Network

Signature:

- **Intern's Name:** Pawan Kumar K.P
- **USN:** 4SO23MC068
- **Internship Position:** Web Developer
- **Company Name:** Accolade Tech Solutions Pvt. Ltd.
- **Reporting Period:** 05.06.2025 – 29.06.2025

Overview of Monthly Activities:

Week 1: Internship Project Setup

- Officially started the internship and received a project overview of the *Vehicle Service Management System*.
- Set up the React.js project environment and installed the necessary dependencies.
- Designed and developed the **Login and Registration pages** for Admin and User roles.
- Created the basic responsive layout structure using React components and CSS.

Week 2: Admin Dashboard and Initial Modules

- Designed the Admin Dashboard layout, incorporating a sidebar and header navigation.
- Implemented route-based navigation for Admin module pages using React Router.
- Started building the Manage Users and Manage Vehicles modules.
- Created tables with edit and delete functionalities for user and vehicle records.

Week 3: Integrating APIs and State Management

- Connected mock APIs to simulate backend data for user and vehicle management.
- Used React hooks such as useState and useEffect for efficient state and effect handling.
- Enhanced form components for adding and editing users and vehicles.
- Applied client-side validations and toast messages for CRUD actions.

Week 4: Expanding Admin Features

- Continued development of Admin modules, including:
 - View Feedback – displaying feedback from users.
 - Customer Details – presenting customer information in tabular format.
- Focused on improving the UI/UX and ensuring data consistency.
- Worked on making components reusable and optimized for future expansion.
- Reviewed code for all Admin modules developed so far and prepared for user module implementation in July.

- **Internship Position:** Web Developer
- **Company Name:** Accolade Tech Solutions Pvt. Ltd.
- **Reporting Period:** 05.07.2025 – 25.07.2025

Overview of Monthly Activities:

Week 1: User Module – Initial Design and Development

- Began the month by designing the **User Module**, focusing on layout planning and UI/UX flow.
- Implemented core user-facing pages such as:
 - **Home Page** – displaying welcome content and system features.
 - **About Page** – providing system and company details.
 - **Request Service Page** – allowing users to book services through a form.
- Created navigation routes and ensured all user pages were responsive and visually appealing.
- Connected form data with mock API endpoints for simulated functionality.

Week 2: Completing User Module

- Developed additional components, including:
 - **Feedback Module** – allowing users to submit feedback with validations.
 - **Settings Page** – enabling users to update their profile details.
- Implemented proper state handling and form validations for all user-side modules.
- Conducted internal testing to ensure user module functionalities work seamlessly and addressed minor bugs.

Week 3: Employee Module Development

- Started building the **Employee Module**, focusing on features like:
 - **Services Page** – displaying assigned services or tasks to employees.
 - **Job Card Module** – enabling employees to update service job cards with details such as start time, end time, total hours, and service status.
- Implemented **View Feedback** and **Settings Page** for employees, similar to other modules but tailored to their role.
- Ensured role-based access control and separation of views for Admin, User, and Employee.

Week 4: Finalization and Internship Completion

- Performed thorough testing across all modules: Admin, User, and Employee.
- Fixed UI inconsistencies and improved the responsiveness across different screen sizes.
- Cleaned up the codebase and structured reusable components for maintainability.
- Documented all modules, routes, and component logic for future reference.
- completed and submitted the final deliverables, concluding the 3-month internship.
