

- handling asynchronous data fetching and state updates when integrating APIs into web applications.
- Ensuring consistent behavior and appearance across different browsers, addressing CSS rendering differences and JavaScript compatibility issues, which can affect the user experience and functionality of web applications.
- Optimizing the performance of web applications, including reducing load times, improving rendering efficiency, and managing memory usage to enhance user experience and meet performance benchmarks.
- Implementing responsive and visually appealing designs, ensuring accessibility, and maintaining consistency across different devices and screen sizes, often involving CSS frameworks or UI libraries.
- Balancing multiple tasks, learning new technologies, and meeting project deadlines, while ensuring productivity and maintaining code quality throughout the internship period.

3.2 LITERATURE REVIEW

To understand the current trends and challenges in frontend development for Cafe Management Systems using ReactJS and Material UI, the following approach was taken:

- Conducted a comprehensive literature review by exploring existing cafe management and restaurant POS websites, including insights from frontend developers involved in such projects.
- Reviewed case studies of Vehicle Assistance Network built with ReactJS and MUI, and gathered user feedback to identify common UI/UX issues and functional requirements.
